**DETAILED ACTION**

***Election/Restrictions***

Applicant's election without traverse of claims 1-27 and 58-75 in the reply filed on 5/16/05 is acknowledged. Examiner agrees that Claims 1, 7, and 58 have been recognized as generic claims.

Claims 28-57 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 16, 2005.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 7, 12, 13, 58-62 are rejected under 35 U.S.C. 102(b) as being anticipated by Misselbrook et al (US 5,984,011).

Misselbrook et al teach everything, including a drill assembly B connected to a non-rotating drill string or coiled tubing CT, and a downhole motor M which is powered by pumping drilling fluids therethrough. The means for diverting a portion of fluid away from said drilling assembly is met by valving means V which diverts a portion of fluid away from the drilling assembly while drilling a deviated or horizontal borehole (See Fig. 1, and col. 6, lines 18+). The means for controlling the flow rate is anticipated by col.

6, lines 22- 32, where pump is used to control the flow rate at a rate greater than the flow rate gauge used for drilling, which inherently controls or adjusts the rate of diverted fluid. The valving means also is inherently used for dissipating the energy associated with the diverted fluid. The claimed dissipater for expending pressure differential is anticipated by the fact that a valve means consisting of a narrow port is capable of generating pressure differential across the valve.

***Allowable Subject Matter***

Claims 5, 6, 8-11, 14-27, 63- 69 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 70-75 are allowed.
